

OFFSHORE

Test & Demonstration Area Port of Rotterdam - Maasvlakte 2

The port of Rotterdam is spot on for the development of innovations in the field of offshore wind. The large scale of the Maasvlakte 2 area allows for testing onshore with offshore conditions saving costs and allowing for more experimentation. Discover the facilities, locations and start to see the possibilities.

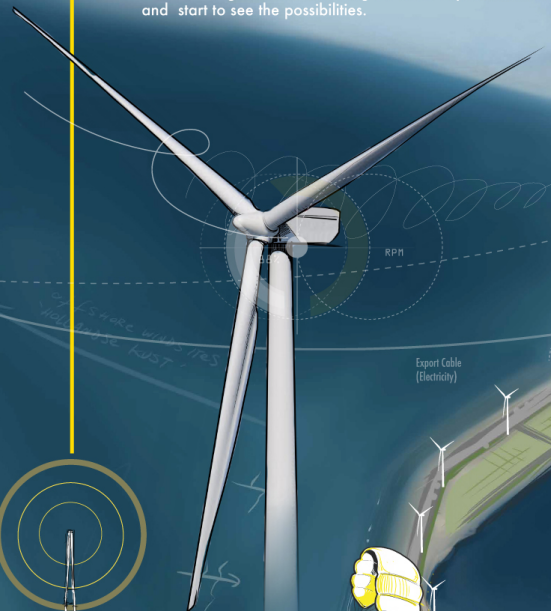

Pile Driving techniques

Foundation techniques

Transition piece - monopile tower possibilities

Cable installation techniques

Energy generation techniques

wind turbine logistics

measurement tower

measurement buoy

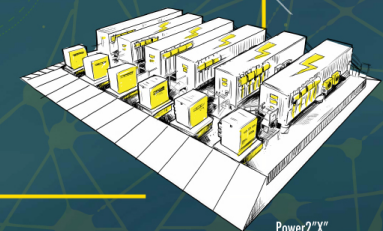

Offshore safety

Drone inspection

Data gathering
